

Construction Digital Transformation Case

Inventory + Damage Claims | Independent analysis and solution design

Challenge

BuildFlow Group tracks reusable equipment and damage incidents through spreadsheets, paper and disconnected messages. Location and custody become unclear, evidence lacks consistent ownership, and Finance manually reconciles repairs. The case investigates those handoffs and designs an integrated operational workflow with a controlled implementation plan.

My approach

Discover → Analyse → Design → Integrate → Automate → Implement → Measure

What I delivered

Stakeholder workshop methodology · BPMN AS-IS / TO-BE models · Requirements and traceability · ERP / API architecture · Power Automate blueprints and reviewed AI · UAT, rollout and change plan

Solution — proposed target

Power Apps → Dataverse command rules → Integration adapter → ERP
Entra identity · SharePoint evidence · Power Automate · Optional reviewed AI

Business impact — illustrative targets

Accuracy: 92% → ≥98% · Claim resolution: 18 → ≤10 business days
Same-shift capture: 55% → ≥95%. Baselines require real validation.

Role fit

Role requirement	Evidence
Business ↔ IT	End-to-end traceability
BPMN	Process models + exceptions
APIs / ERP	Contracts + ownership / reconciliation
Power Automate	Durable approval blueprints
AI	Opportunity assessment + human review
Implementation	UAT + rollout + change plan
