

The business problem

Custody and claim ownership are fragmented.

INVENTORY

Spreadsheets → unclear custody

Search time and duplicate ordering

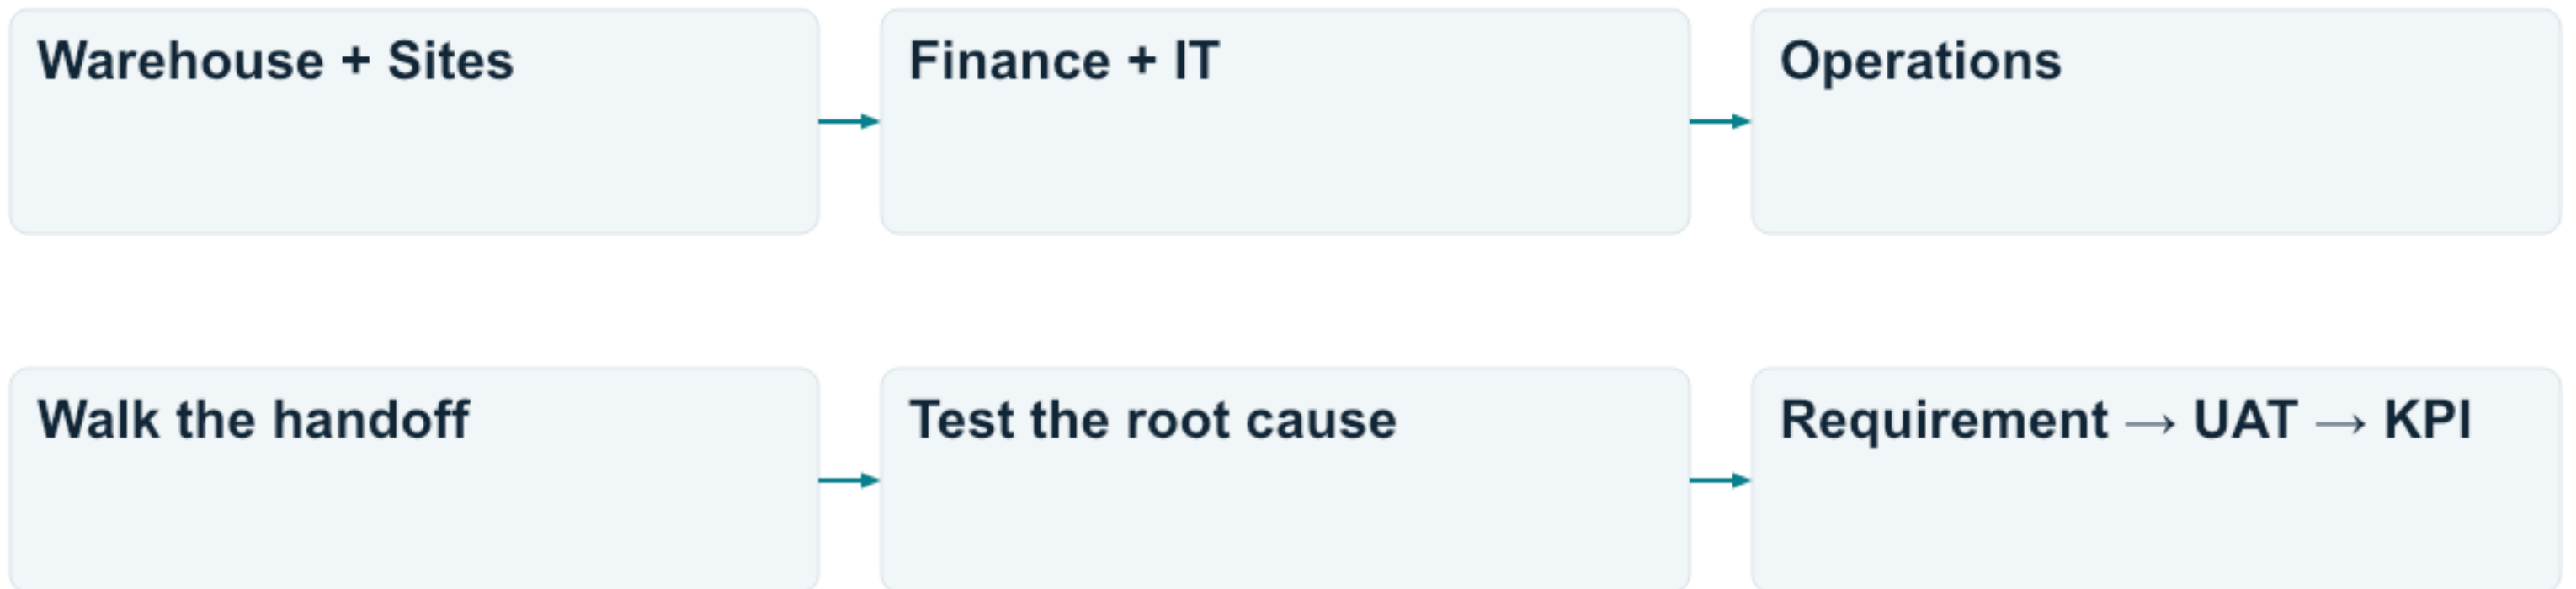

DAMAGE CLAIMS

Messages → unclear ownership

Chasing evidence and repair status

How I approached it

Stakeholder needs become testable process rules.

AS-IS and TO-BE

Inspection determines availability and starts the claim.

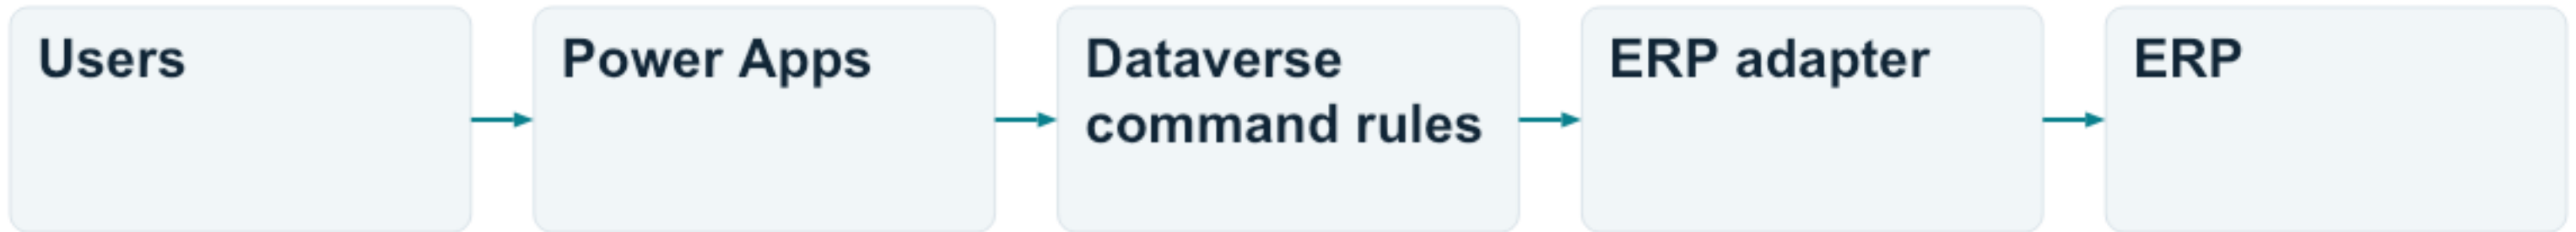

AS-IS Informal return; condition not consistently recorded.

Executive process view; full BPMN lanes and exceptions in source.

Solution architecture

ERP remains the financial system of record.

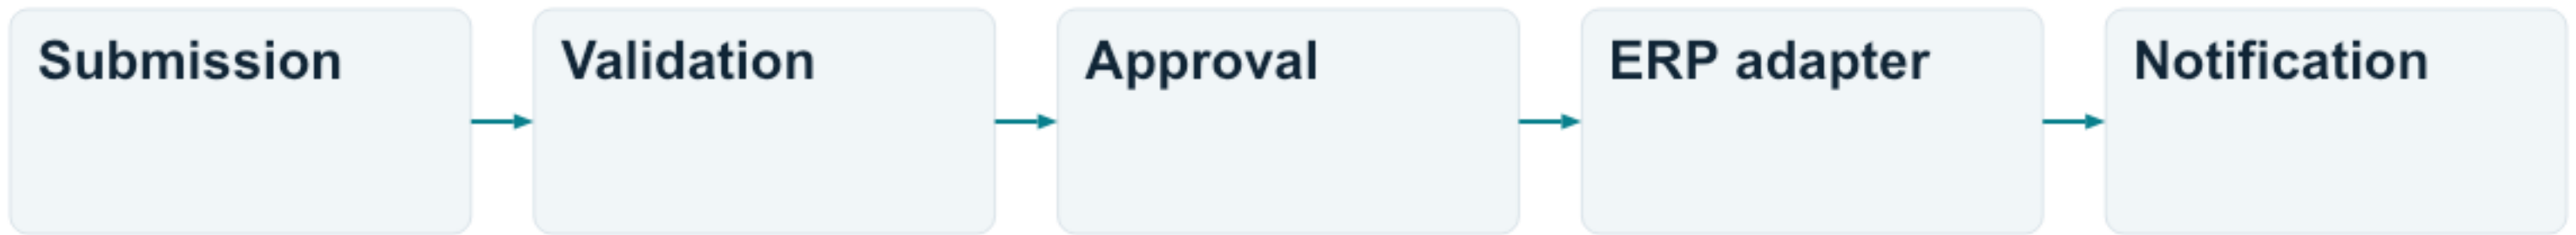

Entra ID · SharePoint evidence · Power Automate · Optional AI · Monitoring

Application: custody, claims, approvals

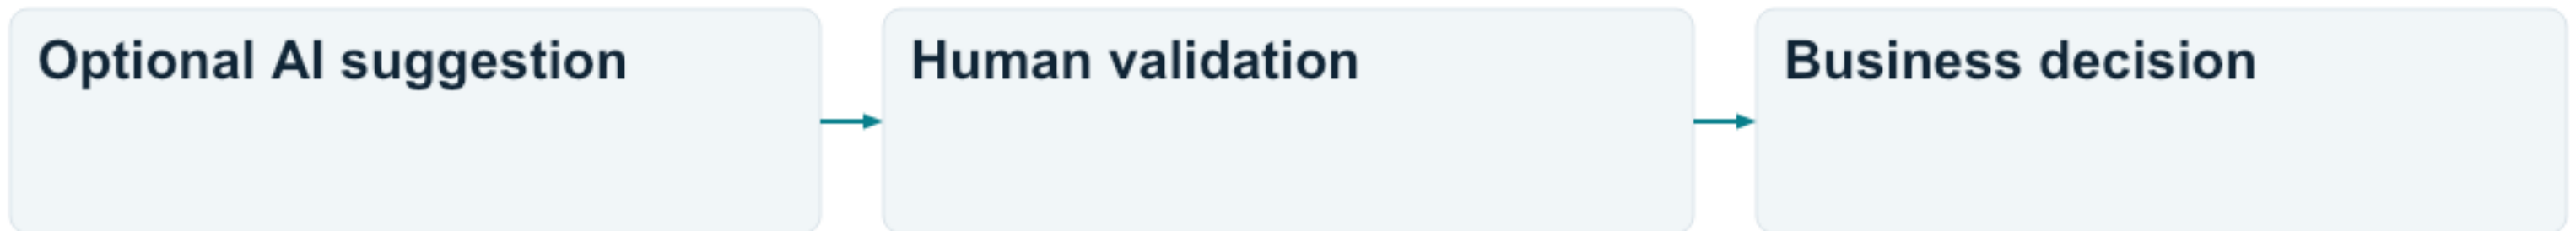

ERP: masterdata, commitments, posted invoices

Automation and AI

Human decisions remain visible and accountable.

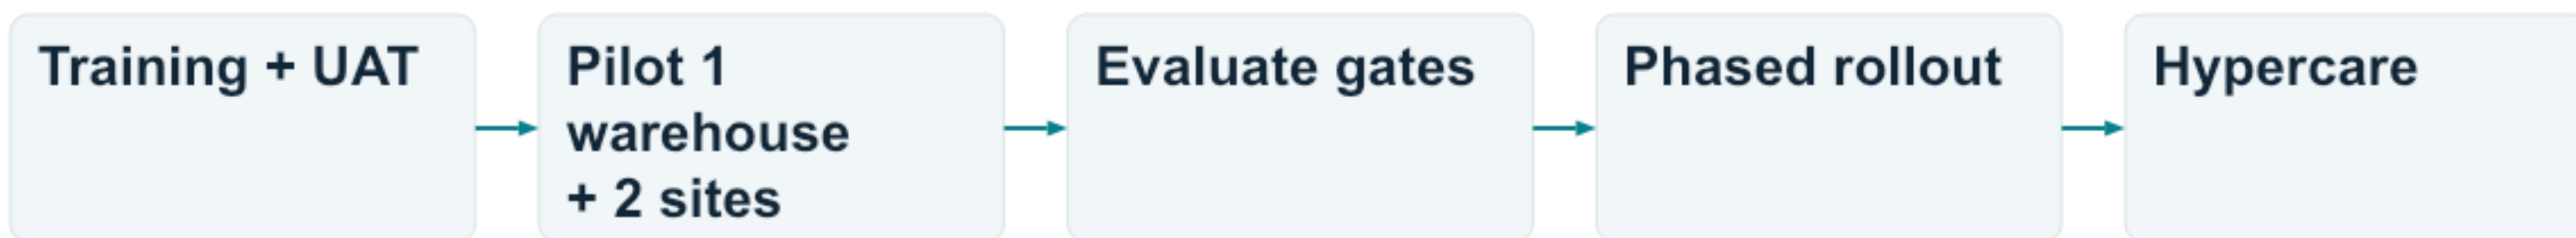

> EUR 5,000: Manager + Finance on the same revision.

From design to production

Readiness depends on user acceptance and support.

24 prepared UAT scenarios · **Migration + rollback plan**

Business UAT remains pending. Measure task success, exceptions and adoption at 30 / 60 / 90 days.

Business value

Targets require a baseline and follow-up measurement.

Measure	Baseline	Target	Owner
Inventory accuracy	92%	≥98%	Warehouse
Claim resolution time	18 business days	≤10 business days	Operations
Same-shift capture	55%	≥95%	Warehouse

Illustrative assumptions and targets; no achieved client results.

Separate cash avoidance from released capacity.

Why this case matters

One traceable journey connects business and IT.

Role capability	Evidence
Discover + analyse	Workshop + traceability
Model processes	BPMN + exception paths
Translate business to IT	Architecture + API / ERP contracts
Automate responsibly	Approval blueprints + reviewed AI
Deliver change	UAT + pilot + training + rollback
Measure value	KPI definitions + conservative business case
